

NGUYEN THANH HUNG

Software Engineer

Phone: 0376640875 **Email:** thanhhungnguyen8204@gmail.com **Address:** Binh Chanh, Ho Chi Minh City
GitHub: github.com/thungnguyen **LinkedIn:** linkedin.com/in/ngthhung

Objective

Final-year Information Technology student at Saigon University with hands-on experience building real-world systems at Dcorp RKeeper Vietnam. Seeking a full-time Backend Developer position to apply software architecture principles and System Design thinking to practical projects. Driven by a continuous learning and growth mindset, I am eager to embrace new technical challenges to optimize system performance, with the ultimate goal of becoming a well-rounded Software Engineer.

Education

Saigon University 2022 – NOW
Bachelor of Engineering in Information Technology

Certificate and Awards

Academic Scholarship awarded: Semester 2, 2024–2025.

Technical Skills

Programming Languages: C#, Python, SQL, JavaScript/TypeScript
Backend Development: .NET Core Web API, Node.js, FastAPI, RESTful API
Database & ORM: SQL Server, PostgreSQL, MySQL, Redis, Entity Framework Core
Realtime & Messaging: SignalR, WebSocket, Socket.io, RabbitMQ, Kafka
Frontend: ReactJS, Next.js
Tools & Architecture: Git, Docker, Microservices, Swagger, Postman, AI Coding Assistants

Work Experience

Dcorp RKeeper Vietnam - Developer Intern Mar 2026 – Jun 2026
QR-based Restaurant Ordering System Ho Chi Minh City, Vietnam
Technologies: Next.js 13+, Zustand, SignalR, C# .NET Core Web API, Autofac DI, linq2db ORM, MySQL, Swagger

- Engineered** Group Ordering features using Next.js and .NET Core Web API, enabling synchronized multi-client cart management for users at the same table.
- Implemented** real-time cart synchronization utilizing SignalR and Zustand, eliminating the need for manual page refreshes and ensuring a seamless user experience.
- Integrated** the QR Ordering platform with the central POS system via RESTful APIs, automating the transmission of online orders to the sales database and reducing manual operational overhead.
- Processed** and standardized raw operational data for the internal Data Warehouse, ensuring data integrity for accurate business intelligence reporting.
- Developed** an internal AI Kit leveraging LLMs to automate source-code analysis and logic review, streamlining the feature testing process for the development team.

Personal Project

AI-powered Personal Finance Management System 2026
Technologies: ReactJS, FastAPI, PostgreSQL, n8n, Redis/RQ, Socket.io, Docker Compose, Gemini API, Dify API, OCR
Repository: github.com/Tahumn/finance-ai-system/tree/tnhu

- Architected** a scalable microservices backend integrating Auth, Finance, and AI Agent services using FastAPI, Node.js, and Docker Compose.
- Built** AI/NLP workflows utilizing Gemini and Dify APIs to parse natural language inputs, achieving automated intent recognition and transaction categorization.
- Integrated** a receipt OCR pipeline using OpenCV and Tesseract to extract structured data from physical images, minimizing manual data entry for users.

FoodFast Drone Delivery 2025
Technologies: ReactJS, Vite, TailwindCSS, Node.js, Express.js, PostgreSQL, WebSocket, RabbitMQ, Docker Compose
Repository: github.com/thungnguyen/FoodDelivery

- Designed** a microservices-based system decoupling User, Order, Payment, and Delivery domains, improving overall application maintainability.
- Implemented** asynchronous service communication via RabbitMQ and established WebSocket connections for real-time order status broadcasting.
- Developed** a drone delivery simulation featuring real-time route visualization on an interactive map to demonstrate complex state management.
