Professional Summary

Final-year Information Technology student at Saigon University, fully available for immediate full-time employment. Backend .NET Developer with hands-on experience developing enterprise services using ASP.NET Core, Entity Framework Core, Dapper, Redis, Apache Kafka, MassTransit, and SignalR. Seeking a Fresher Software Engineer role to build scalable, value-driven products. Eager to contribute high-quality code while rapidly leveling up my skills through practical challenges and constructive mentorship from seasoned professionals.

Technical Skills

Programming Languages: C#, SQL, JavaScript, TypeScript, Python

Backend Technologies: ASP.NET Core, RESTful API, Entity Framework Core, Dapper, FastAPI, Express.js

Architecture: Clean Architecture, Layered Architecture, SOLID Principles, Dependency Injection, Repository Pattern, Event-Driven Architecture

Database & ORM: SQL Server, MySQL, PostgreSQL, Redis

Messaging & Real-time: Apache Kafka, MassTransit, SignalR, WebSocket

DevOps & Tools: Docker, Docker Compose, CI/CD, Git, Swagger, Postman, Visual Studio, VS Code

AI-Assisted Development: Claude, Harness AI, GitHub Copilot, ChatGPT, Gemini

Professional Experience

Dcorp RKeeper Vietnam (SkyX Technology)

Mar 2026 – Jun 2026

Backend Developer Intern

Ho Chi Minh City, Vietnam

- Collaborated with cross-functional teams using **GitLab** to analyze requirements for the **SkyOrder Shared Cart** module, defining host/member roles, participant-based permissions, and order validation rules.
- Developed high-concurrency RESTful APIs using **C# ASP.NET Core** and **MySQL**, implementing security checks based on dynamic user keys to protect active dining sessions.
- Engineered **Redis-based distributed locking** using dynamic table-specific keys to prevent race conditions during concurrent cart updates, eliminating duplicate host authorization issues.
- Optimized database access using both **Entity Framework Core** and **Dapper** to balance maintainability and execution performance.
- Implemented reliable real-time cart synchronization and **backend notification systems** by publishing transactional events via **MassTransit (Apache Kafka)** and developing broadcasting consumers using **SignalR**.
- Containerized backend services using **Docker**, wrote comprehensive **unit tests**, and supported **CI/CD** pipelines to ensure seamless and reliable deployments.

Selected Projects

AI-powered Personal Finance Management Platform | *FastAPI, PostgreSQL, Redis, Gemini API, OCR*

Jan 2026 – May 2026

- Designed and developed an intelligent financial management platform following layered architecture principles to automate invoice processing and provide AI-powered spending insights.
- Integrated **Gemini API** combined with advanced image pre-processing to build an OCR pipeline that extracts transaction details from uploaded invoices with high accuracy.
- Leveraged **Redis Queue (RQ)** to handle asynchronous background processing for long-running document analysis tasks, keeping API response times optimized.
- Applied research on **Agentic AI** concepts to develop automated financial insights, detecting spending anomalies and forecasting monthly budgets based on historical data.
- Repository: github.com/Tahumn/finance-ai-system/tree/tnhu

Drone-based Food Delivery Simulation | *Node.js, Express.js, MongoDB, Redis, Docker Compose*

Sep 2025 – Dec 2025

- Led the backend architecture design of a microservices-based platform separating Restaurant, Order, Delivery, and API Gateway services.
- Implemented **Redis Pub/Sub** and WebSocket communication for synchronous, real-time drone tracking and route visualization on an interactive map.
- Containerized all independent backend services using **Docker Compose** to streamline local environment setup and ensure configuration consistency.
- Repository: github.com/thungnguyen/FoodDelivery

Education

Saigon University	2022 – Present
Bachelor of Engineering in Information Technology	Ho Chi Minh City, Vietnam
• Honors: Academic Scholarship awarded for academic excellence (Semester 2, 2024 – 2025).	

Languages

Vietnamese: Native
English: Intermediate (Capable of communicating effectively in technical discussions and reading documentations)
