

NGUYEN THANH HUNG

Backend Developer

Phone: 0376640875 **Email:** thanhhungnguyen8204@gmail.com **Address:** Binh Chanh District, Ho Chi Minh City
GitHub: github.com/thungnguyen **LinkedIn:** linkedin.com/in/ngthhung

Objective

Backend Developer with hands-on experience building features for a real-world QR-based restaurant ordering system at Dcorp RKeeper Vietnam. I worked on the Shared Cart module for Group Ordering, focusing on participant-based permissions, Redis concurrency control, realtime synchronization, and POS/Kitchen order flow adaptation. Seeking a role where I can contribute to practical software products, learn from experienced engineers, and grow steadily within the engineering team.

Technical Skills

Core Backend: C#, ASP.NET Core Web API, RESTful API, SQL, Business Logic Implementation
Database & ORM: MySQL, SQL Server, PostgreSQL, Redis, linq2db, Database Design
Realtime & Messaging: SignalR, WebSocket, Kafka, RabbitMQ
Other Technologies: JavaScript/TypeScript, ReactJS, Next.js, FastAPI, Node.js
Tools: Git, Docker, Swagger, Postman, Visual Studio, VS Code, AI-assisted coding tools

Work Experience

Dcorp RKeeper Vietnam **Mar 2026 – Jun 2026**
Backend Developer Intern Ho Chi Minh City, Vietnam

Project: SkyOrder – QR-based Restaurant Ordering System
Module: Shared Cart for Group Ordering
Technologies: C#, ASP.NET Core Web API, MySQL, Redis, linq2db, Kafka, SignalR, Next.js, Zustand, Swagger

- Participated in requirement analysis for the Shared Cart module, clarifying Host/Member roles, participant-based cart ownership, and order confirmation rules.
- Developed backend services using C# ASP.NET Core Web API and MySQL, implementing participant-key based ownership and permission validation for concurrent users at the same dining table.
- Integrated Redis-based distributed locking using dynamic keys by table/order identifier to prevent duplicate Host assignment and reduce conflicts during concurrent cart updates.
- Managed cart state transitions (Member Ready/Host Confirm) and adapted the existing POS/Kitchen submission flow by mapping shared cart data into persistent order schemas.
- Implemented realtime cart synchronization by publishing events via MassTransit Kafka and developing SignalR-based broadcasting consumers for active participants.

Personal Projects

AI-powered Personal Finance Management System (Team of 4) **2026**
Technologies: ReactJS, FastAPI, PostgreSQL, Redis/RQ, Socket.io, Docker, Gemini API, OCR
Repository: github.com/Tahumn/finance-ai-system/tree/tnhu

- Developed backend features for bill and receipt management in a personal finance system, supporting uploaded receipt images and structured expense data.
- Implemented an OCR-based invoice extraction flow using FastAPI, image processing, and Gemini API to extract merchant, transaction date, total amount, VAT, and line items from uploaded images.
- Built AI-assisted financial insight features to analyze user spending data and provide suggestions such as spending anomalies, forecasts, and saving tips.

Drone-based Food Delivery Simulation System (Team of 2) **2025**
Technologies: ReactJS, Node.js, Express.js, MongoDB, Socket.IO, Redis, Docker, MapTiler API, ORS API
Repository: github.com/thungnguyen/FoodDelivery

- Led a team of 2 in the development of a drone-based food delivery simulation system with separated Auth, Restaurant, Order, Payment, Delivery, and Realtime Gateway services.
- Designed backend APIs and MongoDB schemas for drone hubs, drones, deliveries, tracking logs, order management, payment flow, and delivery status updates.
- Implemented realtime drone tracking and route visualization using Socket.IO, Redis pub/sub, and map/route APIs to simulate delivery movement on an interactive map.

Education & Awards

Saigon University **2022 – Present**
Bachelor of Engineering in Information Technology
Awards: Academic Scholarship awarded (Semester 2, 2024–2025).
